

Third-year computer science student who builds web applications end to end, from the database and API to the interface. Won the Implementation Category at Sensora 2.0, VIT Vellore, with SurgeGuard, a real-time crowd-safety platform, and completed a MERN stack internship at GenLab. Looking for a software engineering internship.

Experience

MERN Stack Developer Intern

GenLab Pvt. Ltd., Nagercoil (on-site)

Jun 2026 to Aug 2026

- Worked on real-world web applications across the MERN stack: MongoDB, Express.js, React.js and Node.js.
- Handled API integration and database management. Completion certificate GL/INT/26/183.

Projects

SurgeGuard

Real-time crowd-safety platform, team project

2026

Python, YOLO, ByteTrack, FastAPI, WebSockets, SQLAlchemy, React, TypeScript, Arduino   [GitHub](#)

- Won the Implementation Category at Sensora 2.0, graVITas '26, VIT Vellore.
- Turns live camera feeds into an explainable 0 to 100 Crowd Stability Index from crowd density, movement suppression, exit congestion, opposing flow and rate of change, with plain guidance for operators.
- FastAPI backend with real-time WebSockets and persisted history, a React and TypeScript command center, a phone alert app for security staff, and Arduino light and buzzer alerts over USB serial.
- Covered by 492 automated tests: 405 backend, 72 dashboard and 15 alert app.

RepX

Live 1v1 fitness battles with verified reps

2026

React, TypeScript, NestJS, Socket.IO, Prisma, MediaPipe   [GitHub](#)

- 60-second matches where pose estimation in the browser counts only valid reps; results settle ELO ratings like chess.
- Matchmaking, leaderboards, tournaments and anti-cheat; seven exercises as plugins in an engine with 64 tests.
- Accounts with email verification, Google and Apple sign-in, and refresh-token rotation with replay detection.

Multi-Mode AI Translator

Languages, Morse code and voice, team project

2025

Python, Flask, Gemini API, Web Speech API, Tailwind CSS   [GitHub](#)

- Translates between 21 languages with the Gemini API, encodes and decodes Morse code with a tap pad, and takes voice input; the API key stays on the server.

**Also:** Anatomix AI, a 3D anatomy app (in progress); HealthSys EMR (course project); AgriTrace (hackathon project). Demos at havenleno22.github.io.
